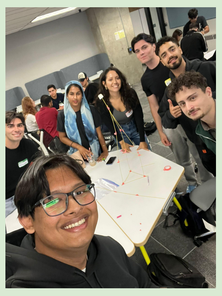
Human-Centered AI Assurance Framework

C4- Cross Campus Capstone Classroom

Capstone Project Showcase 2026 York University- Community Partner TD

Our Team

- Max Catricala (Mechanical Engineering)
- Alessandro Tesa (Commerce)
- Natalia Garcia (Psychology)
- Amirhossein Mansouri (Computer Science)
- Barbod Habibi (Computer Science)
- Rameen Kahloon (Business Economics)
- Aabrar Raiyan (Business)



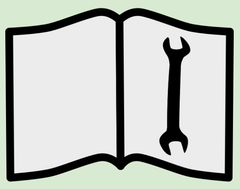
The Proposed Problem

How might we integrate AI and other emerging technologies in the workplace in ways that protect employee wellbeing, privacy, and security?

United Nations SDGs

Current Condition of AI Use

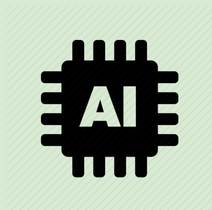
1.1 billion jobs projected to be influenced by technology in 10 years [1]



58% of employees have received zero formal training on the use of AI [2]

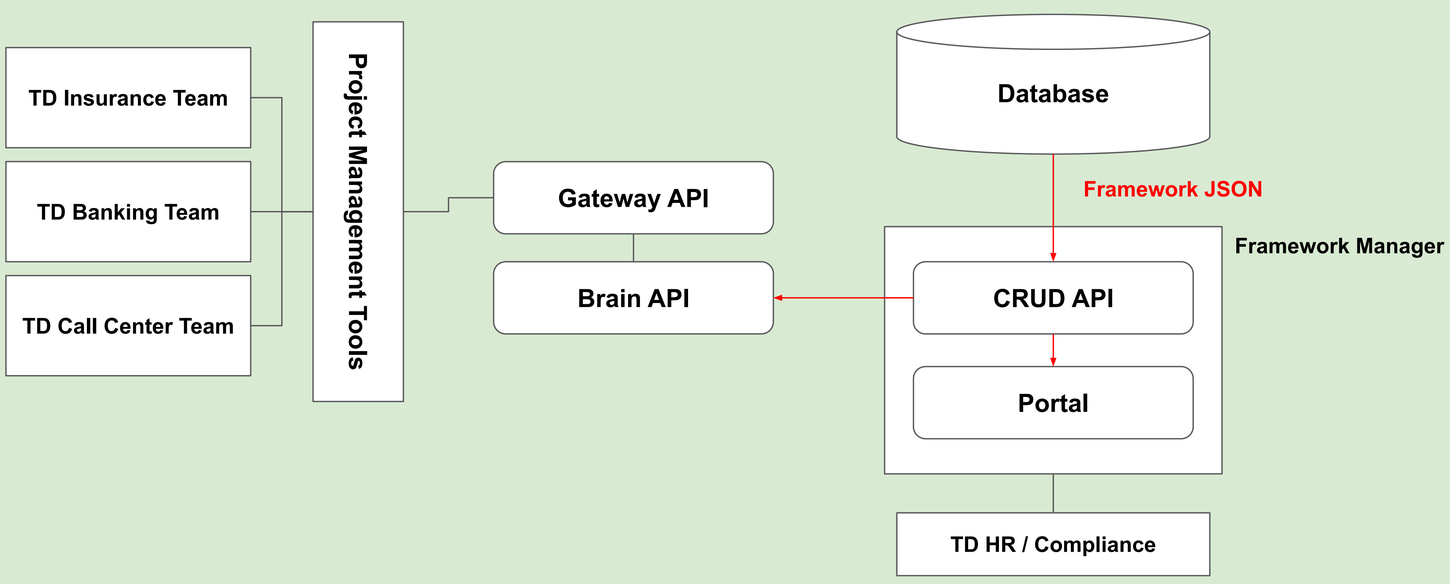
By 2027, **50%** of business decisions will be augmented by AI [3]

43% of employees admit to sharing sensitive work information to AI [2]



29% of employees pay for their own AI tools at work, bypassing IT oversight [2]

Solution Architecture

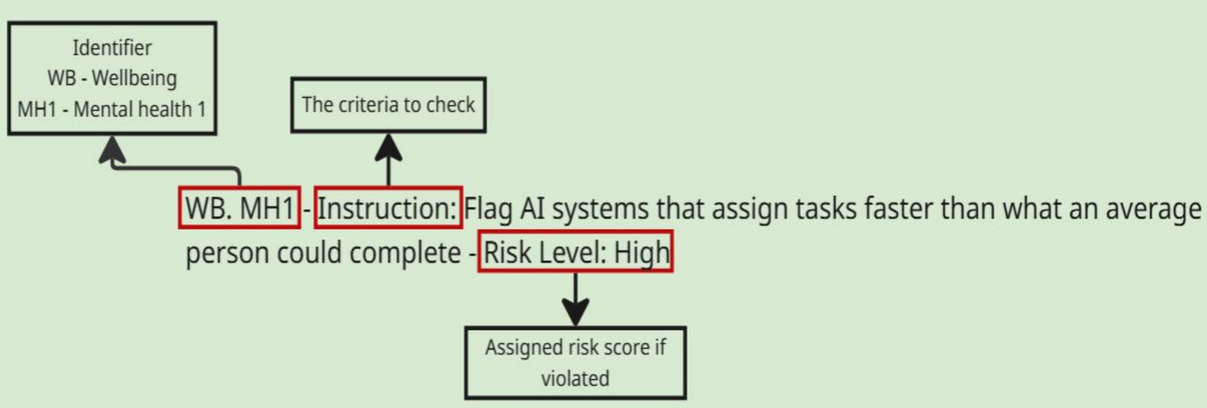


How it Works

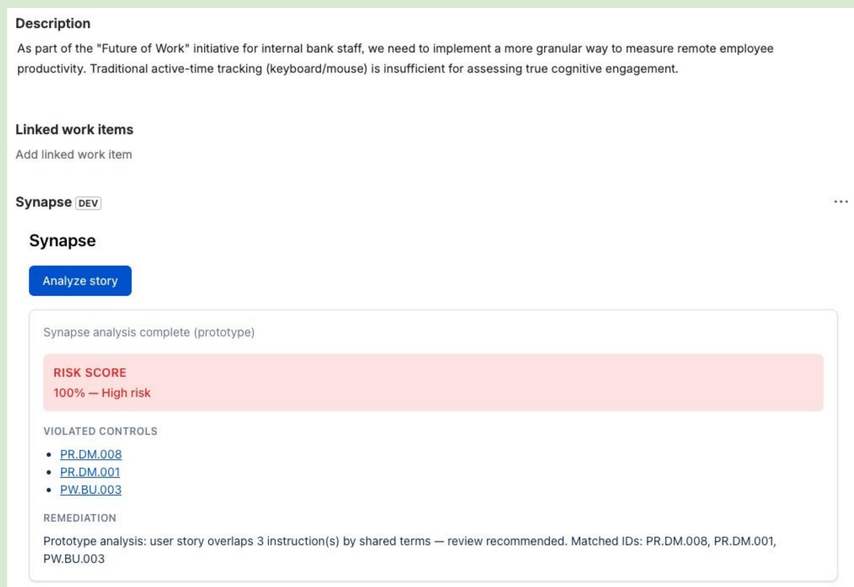
The solution is designed to address any wellbeing, privacy, and security concerns at the developmental phase of the AI tool.

1. Project managers enter tickets into project managment system ie. Jira
2. Plug-in software scans each ticket and checks for any violations against the framework
3. Plug-in notifies project manager about any identified violations
4. Project manager enters new tickets to address violations
5. AI tool is developed in accordance to the framework

Key Component: The Framework



Key Component: Project Management Plug-in



Description

As part of the "Future of Work" initiative for internal bank staff, we need to implement a more granular way to measure remote employee productivity. Traditional active-time tracking (keyboard/mouse) is insufficient for assessing true cognitive engagement.

Linked work items

Add linked work item

Synapse DEV

Synapse

Analyze story

Synapse analysis complete (prototype)

RISK SCORE
100% — High risk

VIOLATED CONTROLS

- PR.DM.008
- PR.DM.001
- PW.BU.003

REMEDIATION

Prototype analysis: user story overlaps 3 instruction(s) by shared terms — review recommended. Matched IDs: PR.DM.008, PR.DM.001, PW.BU.003

Key Features

Identification code to easiy identify violated criteria

Calculated risk level of ticket with violations

Links to bring user to framework violation directly
